

AIR BUBBLE WASHER

GPMBW

* AIR BUBBLE WASHER (Jacuzzi)

It Contains An Air Blower That Produces Fresh Air Bubbles Which improve the quality of washing by friction with air bubbles with potatoes, then after washing the potatoes pass to the conveyor belt which used to wash the product with air bubbles by moving the conveyor belt up to a height of 2 meters .The conveyor belt is made of heat resistant plastic When the cut potatoes leave the tank by the conveyor, they are washed with fresh water through sprinklers on top of the conveyor. The belt works by stirring the potatoes with bubbles to extract the initial starch, and the basin is discharged of the dirty water through two holes of 200 mm diameter Made of stainless steel 304.
