

BRUSH PEELER WASHER

GVANMA

* BRUSH PEELER WASHER

The Brush Machine Removes Peel from The Potato.

A platform of four, six or eight rotating brushes effectively removes and separates the peel without causing any damage to the product.

The brush machine fits seamlessly with the steam peeler .

The brush machine is made of stainless steel 304.

The toothed belt drive ensures a robust and reliable machine. The range runs from 4 to over 25 tons per hour.

The peristaltic pump drains the almost dry peel effortlessly from the waste catch pan.

The adjustment of the transport screw is variable, so you can adjust the retention time without changing the rotational speed of the brushes.
