

## DRIVEN ROLLER CONVEYOR

GDRC

### \* DRIVEN ROLLER CONVEYOR

To Control By Hand Peeling Potatoes That Have not been peeled well in the peeler designed in the form of rolled balls made of food polyamide to turn the potatoes from all sides and this allows the operator to better see the potatoes that have not been peeled from all directions made of stainless steel 304 and equipped with a washing system for the dirt chambers that resulting from the manual cleaning process, which prevents potato peels and waste from sticking to the wall of the waste bin by pumping water onto the wall of the room, which leads to dirt falling into the water with each other, and this filter drains the water, isolates the dirt, and then puts the water back in clean
